HOSTMINE

AlgoSwitcher

The AlgoSwitcher service is provided by HOSTMINE for crypto mining servers hosted via the HOSTMINE portal.

This service allows those mining to switch their algorithm to an alternative one when operating ASIC servers.

Users will be able to choose from a list of available, switchable algorithms, in exchange for a monthly fee. The hashrate provided will be equivalent to that of the currently hosted server capabilities, the calculation of which is based on W/h (power to hash ratio) metrics

AlgoSwitcher will benefit those mining when their currently hosted ASICs experience a decrease in their mined revenue earnings, due to multiple negative market and network factors.
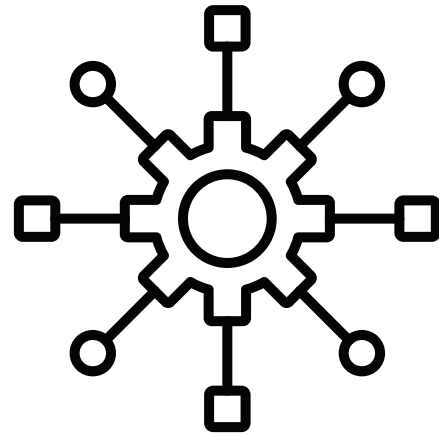

This service safeguards against eventssuch as "FORKS" and "ORPHAN CHAINS".

Based on the user's server portfolio, there will be a choice to select from a list of available, switchable algorithms.

Upon requesting the change, a system generated invoice is raised, which may be settled in BTC, ETH, USDT.

Or this can be done via bank Direct Debit, Standing Order or Credit Card.

Upon receipt of cleared payment, the requested change will, with best endeavours, be implemented within 1 hour during the hours of service ability being 7 days, 9am-12pm BST.
